TOXICOLOGY

VOLUME CONTENTS

Volume 57 (1989)

Lung cell reactions in guinea pigs after inhalation of asbestos (amosite) (**Chronic exposure to amosite leads to cellular reactions in the lung**)
by M. Sjöstrand, R. Rylander and R. Bergström (Gothenburg, Sweden) 1–14

Characterization of the induction of rat hepatic microsomal drug-metabolizing enzymes by 1-nitropyrene metabolites, 1-aminopyrene and *N*-acetylaminopyrene (**These aromatic hydrocarbons induce cytochrome *P*-450 isoenzymes similar to those after 3-methylcholanthrene**)
by M.A. Belisario. R. Pecce, F. Scopacasa, A.R. Arena and N. Staiano (Napoli, Italy) 15–27

On the role of mitochondria in cell injury caused by vanadate-induced Ca^{2+} overload (**Mitochondrial function is important for the Ca^{2+} modifying effects of vanadate**)
by P. Richelmi, F. Mirabelli, A. Salis, G. Finardi, F. Berte and G. Bellomo (Pavia, Italy) 29–44

The in vivo oxidative metabolism of 2,4- and 2,6-dimethylaniline in the dog and rat (**Divergent pathways in metabolism are documented**)
by C.R. Short, M.L. Hardy and S.A. Barker (Baton Rouge, LA) 45–58

Metabolism of *N*-nitroso-hydroxyethyl-alkylamine phosphate esters in the rat (**These possibly biogenic conjugates of nitrosamines are rapidly degraded**)
by N. Frank, E. Frei and M. Wiessler (Heidelberg, FRG) 59–67

Bleomycin and cyclophosphamide toxicity in mice with damaged lung tissue (**Bleomycin and cyclophosphamide are more toxic in mice with damaged lungs**)
by J.P. Kehrer (Austin, TX) 69–82

Polychlorinated biphenyl (Aroclor 1254) induced changes in femur morphometry calcium metabolism and nephrotoxicity (**Aroclor 1254 is nephrotoxic and weakens femur structure**)
by J.E. Andrews (Research Triangle Park, NC) 83–96

Immunotoxicity of tributyltin oxide in rats exposed as adults or pre-weanlings (**The developing rat appears to be more sensitive to the immunosuppressive effects of TBTO than is the mature rat**)
by R.J. Smialowicz, M.M. Riddle, R.R. Rogers, R.W. Luebke and C.B. Copeland (Research Triangle Park, NC) 97–111

Contents of Journals relating to Toxicology 113–115

Review Paper

Comparative assessment of the toxicology of vitamin A and retinoids in man
by H.K. Biesalski (Mainz, FRG) 117–161

Research Papers

Thirteen-week toxicity study of *n*-hexane in B6C3F$_1$ mice after inhalation exposure (**Pathologic examination of nerves was a more sensitive index for the detection of neurotoxicity than were behavioural tests**)
by J.K. Dunnick, D.G. Graham, R.S.H. Yang, S.B. Haber and H.R. Brown (Durham and Research Triangle Park, NC) 163–172

Effects of the benomyl metabolite, carbendazim, on the hypothalamic-pituitary reproductive axis in the male rat (**Carbendazim produced elevation of serum FSH and LH, suggesting that supragonadal changes may be involved in carbendazim-induced fertility reduction**)
by J.M. Goldman, G.L. Rehnberg, R.I. Cooper, L.E. Gray, Jr., J.F. Hein and W.K. McElroy (Research Triangle Park, NC) 173–182

Interactions of manganese with human brain glutathione-*S*-transferase (**A possible role of 65T inhibition in the production of Parkinson symptoms by manganese is investigated**)
by A. Vescovi, M. Gebbia, G. Cappelletti, E.A. Parati and A. Santagostino (Milan, Italy) 183–191
Cephaloridine nephrotoxicity in streptozotocin induced diabetic Fischer 344 (F344) rats (**Nephrotoxicity is attenuated in rats with streptozotocin-induced diabetics**)
by M.A. Valentovic, J.G. Ball, C. Elliott and E. Madan (Huntington, WV) 193–207
Percutaneous toxicity of ethylene glycol monomethyl ether and of dipropylene glycol monomethyl ether in the rat (**After cutaneous absorption there are differences mainly in testicular toxicity between the two glycerols**)
by S. Fairhurst, R. Knight, T.C. Marrs, J.W. Scawin, M.S. Spurlock and D.W. Swantson (Wiltshire, UK) 209–215
Formation of nuclear anomalies in rat intestine by benzidine and its biliary metabolites (**Bile born benzidine metabolites may induce early stages of carcinogenicity in intestinal mucosa**)
by A.J. Percy, N. Moore and J.K. Chipman (Birmingham, UK) 217–223
Announcement 225
A review of the toxicity and carcinogenicity of anthraquinone derivatives
by L.E. Sendelbach (Worcester, MA) 227–240
Variability in soman toxicity in the rat: Correlation with biochemical and behavioral measures (**Inhibition of cholinesterase activity by soman in the thoracolumbar regions of the rat spinal cord gives best correlation with inhibition of cholinesterase activity in brain regions of a given animal**)
by V.R. Jimmerson, T.-M. Shih and R.B. Mailman (Chapel Hill, NC) 241–254
Biochemical responses of rat and mouse lung to inhaled nickel compounds (**Based upon equivalent concentrations of nickel in air, toxicity rating is $NiSO_4 > Ni_3S_2 > NiO$**)
by J.M. Benson, D.G. Burt, Y.S. Cheng, F.F. Hahn, P.J. Haley, R.F. Henderson, C.H. Hobbs, J.A. Pickrell and J.K. Dunnick (Albuquerque, NM and Research Triangle Park, NC) 255–266
Protective effect of flavonoids on drug-induced hepatotoxicity in vitro (**Flavonoids protect liver cells by preventing cell membrane damage**)
by J.C. Davila, A. Lenherr and D. Acosta (Austin, TX) 267–286
Perturbation of glutathione by a central action of morphine (**The following possibilities to explain the action of morphine have been excluded: decreased respiration, body temperature or cellular oxidation**)
by N.P. Skoulis, R.C. James, R.D. Harbison and S.M. Roberts (Little Rock, AR and Gainesville, FL) ... 287–302
Muscle necrosis by *N*-methylated *p*-phenylenediamines in rats: Structure-activity relationships and correlation with free-radical production in vitro (**There is indirect evidence that myotoxicity is related to free radicals**)
by R. Munday, E. Manns, E.A. Fowke and G.K. Hoggard (Hamilton, New Zealand) 303–314
Retention and distribution of manganese in the mouse brain following acute exposure on postnatal day 0, 7, 14 or 42: An autoradiographic and gamma counting study (**Kinetics of neonatal uptake and retention of manganese in mouse brain are described**)
by A.A. Valois and W.S. Webster (Sydney, Australia) 315–328
Preclinical evaluation of hematopoietic toxicity of antileukemic agent, 5-AZA-2′-deoxycytidine (**Given during a 12-h period (20 mg/kg in mice, 7 mg/kg in dogs), 5-Aza-CdR produces bone marrow toxicity within 7—16 days followed by recovery**)
by R.L. Momparler, F.A. Gonzales, L.F. Momparler and A. Ma (Quebec, Canada and Los Angles, CA) 329–336
Announcement 337
Contents of journals relating to Toxicology 339–342
Subject Index Volume 57 343–345
Author Index Volume 57 347–348
